28. Tcongestion.html and 30. Traffic_signal.html are soon to be Available pages – need info

To Get Clarified :

1. Arrive Alive banner link – should the redirection on click must be made to a new page consisting information about campaign or the old page of the Arrive Alive campaign.
2. Add Corridors (if Any)
3. Gallery.html – needs additional images to add.
4. Road AccidentsBooklet.pdf (isneeded)
- 5.RGIA TRPS location-map is required
- 6.Downloadable documents /Applications – Docs.html

Re: AI Chatbot – Update

After a technical review, integrating a third-party AI (like Claude/ChatGPT) directly into the website **will not pass the NIC/NIA security audit** for the following reasons:

- Their servers are located **outside India** — violates CERT-In data residency norms
- External API calls from .gov.in domains require **NIC whitelisting** — not currently approved
- These vendors are **not MeitY empanelled**

Option 1 — Rule-Based JavaScript Chatbot (Recommended — Immediate)

Built entirely within the website with zero external dependencies. It will:

- Cover all major citizen queries (challans, NOC, PS contacts, road rules, emergency numbers, towing zones, etc.)
- Work in **Telugu, Hindi & English**
- Be **fully audit-compliant** with NIC/CERT-In standards
- Be deployable across all 62 pages immediately

Option 2 — Bhashini Integration (Phase 2)

Bhashini is **MeitY's own government AI and translation platform** — runs on Indian government servers, fully compliant, and multilingual.

- Government-approved with no data residency concerns
- More intelligent than a rule-based system
- However, requires **coordination with NIC and MeitY**, additional approvals, and a longer integration timeline
- Best suited as an upgrade once the rule-based chatbot is live and citizen feedback is gathered

Suggested Approach: Deploy the **Rule-Based Chatbot now** for immediate citizen service and audit compliance. Plan **Bhashini as Phase 2** with NIC coordination.

Awaiting your kind approval to proceed.
